Mis-Understanding | The way culture views christianity.

- Can You Believe in the Bible and Science? Part Two -

Ice-Breaker:

- **Why do you think many Christians feel threatened by science?**

Discussion:

Hasn't evolution disproved Genesis?

1. **Can evolution science discover or give a purpose for human life?**
2. **Give an example of how science and the Bible have seemed to be at odds, but upon further examination, one or the other was misinterpreted.**
3. **Read Genesis 1:11-24. The phrase "each according to it's own kind" is repeated over and over again. How might this speak to the theory of macro-evolution (that a species can evolve to another different species)?**
4. **Discuss the following quote coined by Astronomer Fred Hoyle (Cambridge scientist who coined the phrase "The Big Bang"):**
    - ***"The probability of life originating on earth is no greater than the chance that a hurricane sweeping through a scrap-yard would have the luck to assemble a Boeing 747."***

Doesn't the big bang show that God doesn't exist?

5. ***Can* science prove there is no God, or that the God of the Bible does not exist?**
6. **Discuss the following quote coined by Astrophysicist Dr. Brandon Carter:**
    - ***"The more we learn from science, the more we find out that the universe in general, and the earth in particular is a remarkably special place, because so many things that would have to be exactly right in order for life to arise are exactly right. So many laws, contingencies in biology and physics that would have to be fine-tuned precisely are fine-tuned precisely."***
